- The use of polymer powders that are redispersible in water as binding agents for jointing sand, characterized in that functionalized, redispersible polymer powders from the group consisting of
 - a) polyvinyl alcohol-stabilized copolymers of one or more monomers from the group consisting of the of straight-chain vinyl esters or alkylcarboxylic acids having 1 to 18 carbon atoms, methacrylates of acrylates or branched straight-chain alcohols or diols having 1 to 18 carbon atoms, dienes, olefins, vinylaromatics and vinyl halides, which contain from 0.1 to 20% by the total weight, based on weight of the copolymer, one or more postcrosslinking comonomers from the group consisting of acrylamidoglycolic acid (AGA), methyl methylacrylamidoglycolate (MAGME), N-methylolacrylamide (NMA), N-
- 20 methylolmethacrylamide (NMMA), allyl Nmethylolcarbamate, alkyl ethers and esters of Nmethylolacrylamide and of N-methylolmethacrylamide N-methylolcarbamate, and of allyl and 25 acryloyloxypropyltri(alkoxy)and methacryloyloxypropyltri(alkoxy)silanes, vinyl
 - methacryloyloxypropyltri(alkoxy)silanes, vinyltrialkoxysilanes and vinylmethyldialkoxysilanes,
 and
 b) polymers of one or more monomers from the group
- 30 consisting of the vinyl esters of straight-chain or branched alkylcarboxylic acids having 1 to 18 acrylates or methacrylates carbon atoms, branched or straight-chain alcohols having 1 to 18 carbon atoms, dienes, olefins, 35 vinylaromatics and vinyl halides, which polymers stabilized with polymers of ethylenically dicarboxylic unsaturated monoor acids anhydrides thereof, having an acid content of from 50 to 100 mol%,

are used as a mixture with sand.

- 2. The use as claimed in claim 1, characterized in that copolymers a) which contain one or more monomer units from the group consisting of vinyl 5 acetate, vinyl esters of α -branched monocarboxylic acids having 9 to 13 carbon atoms, vinyl chloride, ethylene, methyl acrylate, methyl methacrylate, acrylate, ethyl methacrylate, ethyl propyl acrylate, propyl methacrylate, n-butyl acrylate, 10 n-butyl methacrylate, 2-ethylhexyl acrylate and styrene, and contain from 1 to 10% by weight of monomer units from the more N-methylolacrylamide, consisting οf N-15 methylolmethacrylamide, acryloyloxypropyltriethoxy- and methacryloyloxypropyltriethoxysilane, vinyltriethoxysilane and vinylmethyldiethoxysilane, are used.
- The use as claimed in claim 1, characterized in 20 3. that polymers of vinyl acetate with ethylene, vinyl acetate with ethylene and a vinyl ester of α -branched monocarboxylic acids having 9 to of n-butyl acrylate carbon atoms, with 2 – 25 ethylhexyl acrylate and/or methyl methacrylate, of styrene with one or more monomers from the group consisting of methyl acrylate, ethyl acrylate, propyl acrylate, n-butyl acrylate and 2-ethylhexyl acrylate; of vinyl acetate with one or more 30 monomers from the group consisting of methyl acrylate, ethyl acrylate, propyl acrylate, n-butyl 2-ethylhexyl acrylate and optionally acrylate, ethylene; with from 1 to 10% by weight of Nmethylolacrylamide or N-methylolmethacrylamide, 35 are used as copolymers a).
 - 4. The use as claimed in any of claims 1 to 3, characterized in that partly hydrolyzed polyvinyl alcohols or partly hydrolyzed, hydrophobically

5

30

modified polyvinyl alcohols having a degree of hydrolysis of from 80 to 95 mol% and a Höppler viscosity, in 4% strength aqueous solution, of from 1 to 30 mPa.s are contained as the polyvinyl alcohol.

- The use as claimed in claim 1, characterized in 5. that copolymers b) which are contained one or more monomer units from the group consisting of vinyl acetate, vinyl esters of α -branched monocarboxylic 10 acids having 9 to 13 carbon atoms, vinyl chloride, ethylene, methyl acrylate, methyl methacrylate, ethyl acrylate, ethyl methacrylate, acrylate, propyl methacrylate, n-butyl acrylate, 15 n-butyl methacrylate, 2-ethylhexyl acrylate and styrene, which are stabilized with from 1 to 40% by weight of a protective colloid from the group consisting of the homo- and copolymers of one or more monomers from the group consisting of acrylic 20 acid, methacrylic acid, fumaric acid, maleic acid and maleic anhydride, are used.
- 6. The use as claimed in claim 1 or 5, characterized in that polyacrylic acid or polymethacrylic acid are contained as the protective colloids.
 - 7. The use as claimed in claim 1 or 5, characterized in that copolymers comprising acrylic acid, methacrylic acid and maleic acid (anhydride) units and units of monomers copolymerizable therewith, the proportion of acids being from 80 to 99 mol%, are contained as protective colloids.
- 8. The use as claimed in any of claims 1 to 4, characterized in that the powders based on the copolymers a) also contain bifunctional, masked aldehydes having at least 3 carbon atoms, from which aldehyde groups are liberated in an acidic medium, as crosslinking agents.

5

10

- The use as claimed in any of claims 1 to 4 and 8, 9. characterized in that the powders based on the copolymers a) also contain pulverulent, acidic additives.
- 10. The use as claimed in any of claims 1 and 5 to 7, characterized in that the powders based on the copolymers b) also contain pulverulent, basic additives.
